

Guidelines for Poster Presentations at the AES 123rd Convention

The Audio Engineering Society considers poster papers and lecture papers equal in all respects. The electronic manuscript requirements for both presentation formats are identical: submission of an acceptable preprint manuscript prior to the deadline is required.

Highly detailed papers are best in poster sessions, which permit greater interaction between author and audience. Authors are encouraged to take advantage of the poster format to present their results via tables, figures, and detailed graphics.

Specific requirements for AES 123rd poster presentations are listed below.

Content recommendations

A poster should be able to stand alone, that is, be understandable even if the author is not present to explain, discuss, and answer questions. Although a convention preprint manuscript is required, the poster presentation should not merely be copies of the manuscript pages. Authors are encouraged to consider designing their posters according to a clear outline and logical layout. An example outline might include:

1. Heading (AES paper number, title, author(s))
2. Objectives, goals, and significance
3. Assumptions, key terms, and important limitations
4. Background information, summary of prior work, theoretical foundation
5. Experimental procedure, block diagrams, sketches, photos, parameters
6. Results, supporting data, graphs, tables, etc. (self-contained figure captions are essential!)
7. Conclusions
8. References, bibliography

Authors may choose to include a short biographical note (max. 50 words) on the poster.

The 4-digit AES paper number should be included in the upper right corner of the poster. AES assigns this number; we will advise you of your number.

Poster dimensions and format

Cork mounting boards at the AES 123rd convention will be **38 inches wide x 87 inches tall**. Pushpins will be available in the Authors' Room to secure your poster to the board.

Authors will have access to a table (if desired) to hold laptop computer demos and other supporting items. Authors are reminded that the poster presentation area is often crowded with eager visitors, so unnecessary clutter must be avoided. Standard U.S. electrical power (115V/60Hz) will also be available, if needed.

Posters should contain graphical elements and font sizes that are readable from a distance of about 1 m. Graphs, tables, and diagrams should be at least 20 x 25 cm (8 x 10 inches).
