Sound, Safety and the Electric Vehicle
AES Automotive Audio Conference | September 10, 2017
Who we are

Brian Scherman, Director of Technology + Producer

Joel Douek, Man Made Music Creative Director,
+ Chief Scientist
MAN MADE MUSIC™ is a strategic music and sound studio.

We create unique sonic identities that efficiently and effectively tie together brand experiences.
In less than fifty milliseconds—still six times faster than the blink of an eye—you've already identified the sound and where it's coming from. In the actual time it takes for you to blink, sonic input gets directed through your auditory cortex to other parts of your brain that control memories and emotions.

— Seth Horowitz, PHD of Advanced Brain Science and author of The Universal Sense
One-Second Brain Science

Reaction time to sound is much quicker than all other senses.

- Sound: 146 msecs
- Touch: 149 msecs
- Sight: 189 msecs
- Taste: 500 msecs
- Smell: 500 msecs

## Sonic Strategy

Creating a Sonic Identity and experience begins with understanding the audience, culture and brand.

Our Approach to Work is Creative, Collaborative and Agile.
Finding the Balance of the EV Sound Experience

Safety Semiotics

Iconic Sonic Identity
Sonic Element Attributes

- ORGANIC → SYNTHEIC
- NATURAL → INDUSTRIAL
- TONAL → NON-TONAL
- TRADITIONAL (Internal Combustion Engine) → NEW CONCEPT
- DARK → OPTIMISTIC
- TRANSIENTS (Pulsed, clicks etc) → SMOOTH (Sustained pads)
- WARM → EDGY
Challenges

• Lives are at stake
• Limitations inherent in EV Regulation
• Competing interests of Marketing vs Engineering (branding, zero emission should equal zero noise)
• Contributing to Noise Pollution – 10,000 EV sounds?
• Reconciling existing car designs with new requirements
• No precedents – inherently untested
• Limitations of Playback systems
• Acoustic Isolation
Opportunities

- Iconic Branding - emotionality
- Inventing a new language for machine communication
  (Transitional vs Long Term)
- Autonomy = Humanization = Universality
- Rear external speaker for Reverse Sounds
- Directional sound & intelligent proximity alerts (AI)
- Integration with in-car audio system, for sound cancellation, driver feedback & sonic branding consistency
- Enhanced Playback System
- Meaningful sonic information streams
- Further evolution of regulation based on industry/consumer feedback
