

NEW: Spotlights on Key Topics

The 122nd AES Pro Audio Expo & Convention in Vienna this year will highlight three of the most important topics in audio today: broadcasting, archiving, and live sound. This special spotlight focus will enable convention visitors to find the sessions in their fields of interest.

Archiving and Restoration

Converting analog to digital media is a trend seen in almost all large audio archives, from radio stations to music production companies and nationwide sound archives. To address these growing needs, the AES will offer a series on 'Archiving and Restoration' throughout this year's convention. The series presents a wide range of events and offerings to illustrate the different perspectives on this key topic.

Comprehensive Program

The spotlight on archiving will run events from Saturday through Tuesday. The schedule will allow visitors enough time to hear other papers, attend workshops or seminars, or just explore the exhibition on their own.

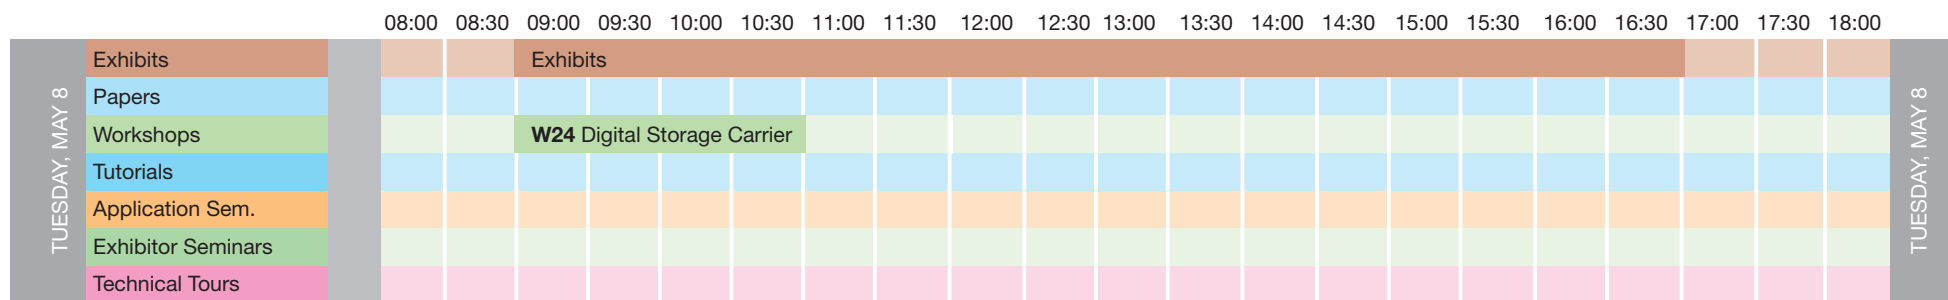

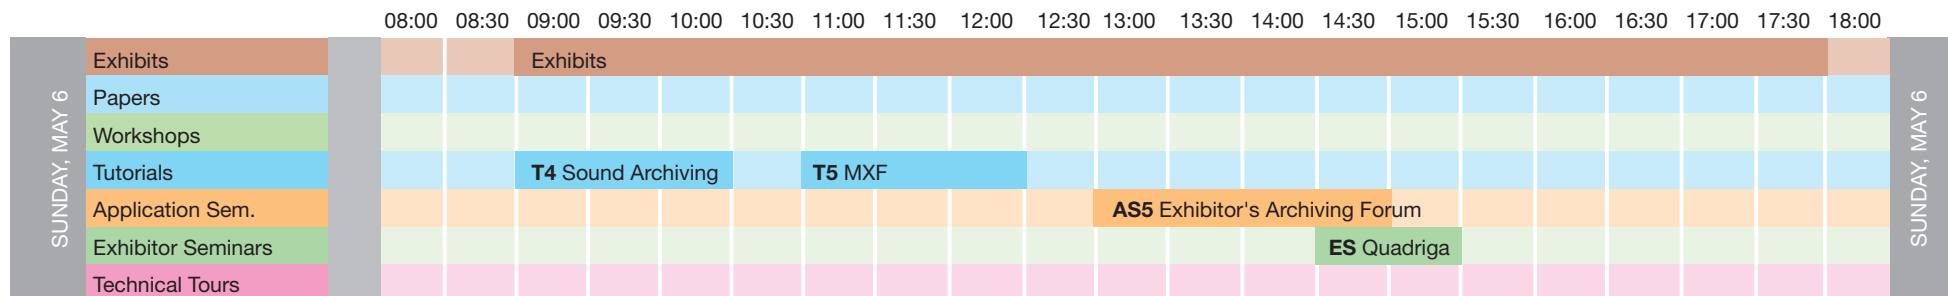

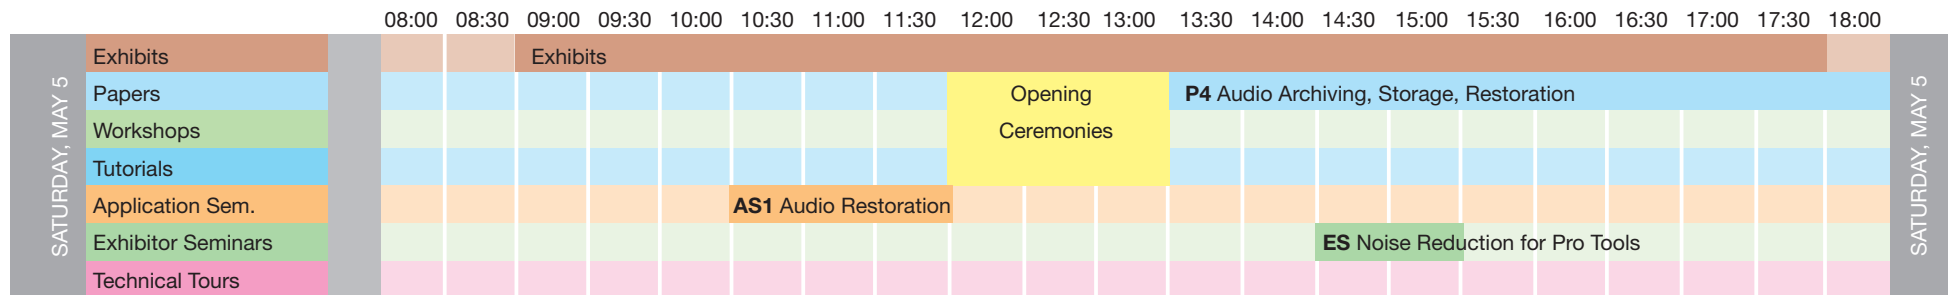

The Elements of the Spotlight on Archiving (As of April 17)

			Room
