Notice and DRAFT agenda
for the meeting of the
SC-04-03 Working Group on loudspeaker modeling and measurement
of the SC-04 Subcommittee on Acoustics
To be held in conjunction with the upcoming AES 153rd Convention.
The meeting is scheduled to take place online, 2022-10.
Please check the latest schedule at: http://www.aes.org/standards/

1. Formal notice on patent policy

2. Introduction to working group and attendees

3. Amendments to and approval of agenda
   Note that projects where there is no current proposal for revision or amendment, and where there is at least 12 months before any formal review is due, are listed in an annex to this agenda. Please let the chair know if you propose to discuss any projects in this annex.

4. Approval of report of previous meeting, held online, 2022-05.

5. Open Projects
   NOTE: One or more of these projects may be in the process of a formal Call for Comment (CFC), as indicated by the project status. In these cases only, due process requires that any comments be published.

AES2-R Review of AES2-2012 (r2018): AES standard for acoustics - Methods of measuring and specifying the performance of loudspeakers for professional applications - Drive units
   scope: This Recommended Practice establishes a set of primary specifications to be followed by manufacturers in describing loudspeaker components used in professional audio and sound-reinforcement system design.
   status: Reaffirmed
   intent: Review
   initiated: 2012
   intent target: 2023
   goal: Draft revised standard
   goal target: Continuing

AES-1id-R Review of AES-1id-2012 (r2017): AES Information Document for Acoustics - Plane-Wave Tubes - Design and Practice
   scope: to establish, expand, and improve the practice for the design and use of plane-wave tube measurement techniques, as recommended in section 2.2.1 of AES2-1984, "Recommended Practice Specification of Loudspeaker Components Used in Professional Audio and Sound Reinforcement."
   status: Reaffirmed in 2017
   intent: Review
   initiated: 2012
   intent target: 2022
   goal: Status Report
   goal target: Ongoing

AES-X168 Characterization of loudspeaker systems
   scope: This document defines a set of characteristics of loudspeaker systems for inclusion in manufacturers’ specification documents, and identifies the relevant methods of measurement. It considers loudspeaker *systems* for professional applications. They may be combinations of active and passive sub-systems. It is intended for users and designers of loudspeaker system installations.

These meetings are subject to the rules of the AESSC, including the AES patent policy, published on the AES standards website.
Please make sure you sign the attendance sheet that will be circulated. This sheet shall be passed to the secretariat after the meeting and will be used to update the membership information for this group.
Please make sure that any documents contributed to the meeting are passed to the secretariat who will ensure they are posted to the appropriate Working Group document site.
AES-X241 End of Line Testing for Production Loudspeaker Drivers

**scope:** This standard specifies parameters and methods of measurement required for end-of-line quality control tests performed on loudspeaker drivers manufactured for automotive, consumer and professional applications. It includes requirements for mechanical setup. It does not consider measurements of loudspeaker systems or multi-driver arrangements.

**status:** Gathering comments on draft, next stage to consider tolerances

6. Liaisons

7. New Projects

8. New Business

9. Date of next meeting
Annex to the agenda

The following projects assigned to this group have no current proposal for revision or amendment, and no formal review is due to report in less than 12 months.

Please let the chair know if you propose to discuss any projects in this annex.

AES56-R  Review of AES56-2008 (r2019), AES standard on acoustics - Sound source modeling - Loudspeaker polar radiation measurements

scope: to specify unified loudspeaker far-field polar radiation measurement practice to provide data suitable for room acoustic modeling programs

status: Reaffirmed version published

intent: Review initiated: 2014 intent target: 2024

goal: none goal target: Continuing

AES73id-R  AES73id-2019: AES information document for acoustics – Loudspeaker driver comparison chambers

scope: This document considers factors affecting the interchangeability of measurement data from simple loudspeaker comparison chambers and discusses some performance capabilities.

status: Initial version published

intent: Review initiated: 2019-08-23 intent target: 2024

goal: none goal target: Ongoing

AES75-R  Review of AES75-2022, AES Standard for acoustics - Measuring loudspeaker maximum linear sound levels using noise

scope: This standard specifies a method for measuring the maximum linear sound levels of a loudspeaker driver or system. It uses a mathematically derived test signal that effectively emulates the dynamic characteristics of music as a function of frequency as well as its spectral content.

status: Initial version published

intent: Review initiated: 2022-02-20 intent target: 2027

goal: Revised Standard goal target: Continuing

End of annex to agenda

These meetings are subject to the rules of the AESSC, including the AES patent policy, published on the AES standards website.

Please make sure you sign the attendance sheet that will be circulated. This sheet shall be passed to the secretariat after the meeting and will be used to update the membership information for this group.

Please make sure that any documents contributed to the meeting are passed to the secretariat who will ensure they are posted to the appropriate Working Group document site.
